

ABSTRACT OF THE DISCLOSURE

A valve, in particular for the oil circuit of an internal combustion engine. The valve includes a supporting dome, a valve body situated therein, a valve disk which is connected to the supporting dome and has an opening which can be closed by the valve body, and an element having a spring action which urges the valve body into the position in which the valve body closes the opening of the valve disk; the valve disk including a receptacle for a screen element, and the screen element being permanently connected to the valve disk.
